PROGRESS ON HUNGER
HAS LARGELY STALLED
The 2023 Global Hunger Index (GHI) reveals limited global progress in reducing hunger since 2015, with a world score of 18.3, just below the 2015 score of 19.1. The prevalence of undernourishment has increased since 2017, reaching approximately 735 million people from 572 million. South Asia and Africa South of the Sahara have the highest hunger levels, each with a GHI score of 27.0, indicating serious hunger. Despite significant progress from 2000 to 2015, both regions have experienced a near-halt in progress since 2015, mirroring the global trend.

YOUTH MUST PLAY A CENTRAL ROLE
IN TRANSFORMING FOOD SYSTEMS
The transition of young individuals into adulthood occurs within a backdrop of imbalanced and unsustainable food systems that struggle to ensure food and nutrition security while also being susceptible to climate change and environmental deterioration. Unfortunately, youth involvement in shaping decisions that impact their future is limited. Embracing the concept of food sovereignty—granting people the right to access healthy, culturally appropriate food produced through environmentally friendly and sustainable practices—offers a chance to actively engage the youth in revamping failing food systems. By channelling their energy and creativity, young people can play a pivotal role in making food systems more sustainable, equitable, and adept at addressing the global population's diverse needs, particularly those most vulnerable.

SOLUTIONS MUST LOOK
BEYOND 2030
Current food system policies fail to break the intergenerational cycle of hunger globally. Solutions must extend beyond 2030, prioritizing the right to food in policies and investments. Addressing young people's livelihoods is crucial, necessitating investments in education, skills, health, and nutrition. Governments should ensure equitable access to resources, social programs, and support for diverse, locally suitable agriculture. Creating viable livelihoods for the youth involves fostering well-functioning markets, better working conditions, and fair wages.
